Lock Parts

Keypad
  • Located on the outside of the lock.
  • Used to enter codes for programming and unlocking.

Thumbturns
  • On the BE369 Deadbolt only.
  • The inside thumbturn may be rotated at any time to retract (unlock) or extend (lock) the bolt.
  • The outside thumbturn can be rotated to retract the bolt after a valid user code has been entered.
  • The outside thumbturn can also be rotated to extend the bolt after the Schlage button has been pressed when Turn Lock feature is enabled.

Lever
  • On the FE599 Lever Lock only.
  • The inside lever can be rotated at any time to retract the latch.
  • The outside lever can be rotated at any time, but will only retract the latch when the lock is unlocked.

Cylinder
  • Located on the outside of the lock.
  • Used only in emergency situations to unlock the lock. See Emergency Key Override on page 6 for more information.

Lock and Unlock Buttons
  • On the FE599 Lever Lock only.
  • Used to put the lock in a locked or unlocked state.
  • When these buttons are used, the lock will remain locked or unlocked until locked or unlocked using the buttons, web interface or phone application.

Lock and Unlock Light
  • On the FE599 Lever Lock only.
  • Lights red when inside lock button is pressed.
  • Lights green when inside unlock button is pressed.
  • Lights only when an inside button is pressed. Does not remain lit.
Programming and User Codes

All locks are pre-programmed with a programming code and two user codes. The programming code and user codes can be changed at any time.

Programming Code
- Used to manually program the lock using the keypad.
- Used to put the lock into enrollment mode.
- Can only be changed by manually using the keypad. See Manual Programming Functions on page 5 for more information.
- CANNOT be used to unlock the lock.
- CAN be used to take a lock out of vacation mode at the keypad. See Vacation Mode on page 4 for more information.
- If you change your programming code and then forget it, you can reset your lock back to factory settings. See Restoring Factory Settings on page 4 for more information.
- The web interface is not affected by a change to the programming code.

User Codes
- Used to unlock the lock.
- May be added and deleted manually, using the keypad.
- User codes are assigned to names in the web portal and can be changed, added or deleted using the web portal.
- If you add a new code to the lock manually, the new code will be displayed on the web portal with an assigned name of New User (#), which can be changed at any time.

Turn Lock Feature
When the Turn Lock feature (available on BE369 Deadbolt only) is disabled, a valid user code must be entered at the keypad in order to lock the lock from the outside.

The Turn Lock feature is enabled by default.

See Manual Programming Functions on page 5 for instructions to disable this feature.
Replacing the Batteries

BE369 Deadbolt
a. Remove cover screws.
b. Remove screw on upper left to release upper battery tray. Hold battery tray in place while loosening screw.
c. Upper battery tray will be released. Fully remove tray and remove three old AA batteries.
d. Remove 9V battery.
e. Remove the 9V connector from the old 9V battery.
f. Replace all batteries with new, high-quality batteries. Reverse steps to replace battery tray and cover. Be careful not to pinch wires when replacing the cover.

FE599 Lever Lock
a. Remove cover screws.
b. Remove cover.
c. Remove battery cover.
d. Remove four old AA batteries.
e. Replace batteries with 4 new, high-quality AA batteries. Reverse steps to replace the battery cover and lock cover.
Restoring Factory Settings

Restoring the factory settings will:

- Restore the original programming code
- Restore the pre-programmed user codes

If you have an active account at www.mynexia.com, the user codes listed in the web interface for the lock will be restored in the physical lock when lock reconnects with the bridge. The original pre-programmed user codes will also be added to the web interface.

Restoring factory settings WILL NOT exclude the lock from the bridge.

**DO NOT reset your lock unless you are able to locate the original programming code. Customer service cannot retrieve a lost programming code.**

1. For FE599, disconnect the batteries. For BE369, disconnect the 9V battery.
2. On the lock keypad, press and release the Schlage button.
3. Reconnect the battery and wait until the Schlage button is no longer lit.
4. Within ten (10) seconds, press and hold the Schlage button until it lights green and the lock beeps.

Vacation Mode

Vacation mode is used to disable all user codes at the keypad. If a valid user code is entered while the lock is in vacation mode, the Schlage button will first light green and then red, and the lock will not unlock.

If you will be away from your home for a period of time in which no one should have access to your lock, it is a good idea to use vacation mode to prevent repeated access attempts.

Vacation mode can be disabled at the keypad by entering the six-digit programming code.

Manual Programming

During normal operation, Schlage Wireless Locks should be managed through the web interface at www.mynexia.com. If internet access is temporarily lost, changes to the lock can be entered manually at the lock’s keypad. When Internet access is restored, the lock will automatically update the web interface with any changes. See *Manual Programming Functions* on page 5 for more information.

</tr>
</tbody>
</table>

1 Beeps will sound only when the beeper is turned on. Low battery beeps will sound even when the beeper is disabled.
### Manual Programming Functions

Press the keys on the keypad as shown in the following steps. Wait for the confirmation indicator before proceeding to the next step. If you make a mistake, wait for all lights and beeps to stop and then start over from the beginning.

1. **Add**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 1
   - Wait For 3 Lights + 3 Beeps
   - Press New \( \text{UC} \) (Four Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press Same New \( \text{UC} \) (Four Numbers)
   - Success!
   - 1 Long Light + 1 Long Beep

2. **Delete**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 2
   - Wait For 3 Lights + 3 Beeps
   - Press Unwanted \( \text{UC} \) (Four Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press Same Unwanted \( \text{UC} \) (Four Numbers)
   - Success!
   - 1 Long Light + 1 Long Beep

3. **Change**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 3
   - Wait For 3 Lights + 3 Beeps
   - Press New \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press Same New \( \text{PC} \) (Six Numbers)
   - Success!
   - 1 Long Light + 1 Long Beep

4. **Enable Vacation Mode (Disable All)**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 4
   - Success!
   - 1 Long Light + 1 Long Beep

5. **Enable/Disable Beeper**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 5
   - Success!
   - 1 Long Light + 1 Long Beep

6. **Delete All2**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 6
   - Success!
   - 1 Long Light + 1 Long Beep

7. **Enable/Disable Turn Lock Feature3**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 7
   - Success!
   - 1 Long Light + 1 Long Beep

8. **Put Lock in Enrollment Mode4**
   - Press \( \text{PC} \) (Six Numbers)
   - Wait For 3 Lights + 3 Beeps
   - Press + 0
   - Success!
   - Blinking

---

1. Enable All User Codes function is available only when user codes are currently disabled.
2. Delete All User Codes function will remove ALL user codes, but will not change the programming code. User Codes cannot be recovered after this function is completed.
3. The Turn Lock Feature is available only on the BE369 (deadbolt). When this feature is disabled, a valid user code must be entered in order to lock the lock from the outside. The Turn Lock feature is enabled by default.
4. Bridge must be put into enrollment mode before lock for successful enrollment/exclusion.
### Troubleshooting
