Installing Dimmer by itself or with other devices:

1. Follow the steps as outlined on the installation diagram.
2. Remove the Red insulating label from the terminal screw marked “YL/RD”.
3. WARNING: First Traveler wall box wire to terminal screw marked “RD”.
4. To avoid overheating and possible damage to this device and other equipment, do not install to control a receptacle, fluorescent lighting, a motor- or a transformer-operated appliance.
5. If you are unsure about any part of these instructions, consult a qualified electrician.
6. To be installed and/or used in accordance with appropriate electrical codes and regulations.
7. This includes mercury-vapor, sodium vapor and metal halide lamps.
8. If you are unsure about any part of these instructions, consult a qualified electrician.
9. This includes mercury-vapor, sodium vapor and metal halide lamps.
10. Use only one (1) Vizia RF+™ dimmer in a multi-location circuit with up to 9 coordinating remotes (without LEDs) or up to 4 matching remotes (with LEDs). The remote(s) will turn the light on at the brightness level selected at the dimmer.

Changing the color of your Dimmer:

1. The device may include color options. To change the color of the face, proceed as follows:
2. Push in side tab at release.
3. Line up tabs and press sides one at a time at a distance.

WARNING: To avoid fire, shock, or death; connect wiring while clothing is draped over it, a fire could result.

CAUTION:

1. Do not use the remote for the control of high power heating appliances such as portable heaters. This could result in overheating and possible damage to your device and other equipment.
2. Do not use the remote to control a receptacle, fluorescent lighting, a motor- or a transformer-operated appliance.
3. This includes mercury-vapor, sodium vapor and metal halide lamps.
4. To be installed and/or used in accordance with appropriate electrical codes and regulations.
5. This includes mercury-vapor, sodium vapor and metal halide lamps.
6. Use only one (1) Vizia RF+™ dimmer in a multi-location circuit with up to 9 coordinating remotes (without LEDs) or up to 4 matching remotes (with LEDs). The remote(s) will turn the light on at the brightness level selected at the dimmer.

Tools needed to install your Dimmer:

1. Screwdriver
2. Slotted/Phillips Screwdriver
3. Electrical Tape
4. Pliers
5. Pencil

Changing the color of your Dimmer:

1. The device may include color options. To change the color of the face, proceed as follows:
2. Push in side tab at release.
3. Line up tabs and press sides one at a time at a distance.

WARNING: To avoid fire, shock, or death; connect wiring while clothing is draped over it, a fire could result.

CAUTION:

1. Do not use the remote for the control of high power heating appliances such as portable heaters. This could result in overheating and possible damage to your device and other equipment.
2. Do not use the remote to control a receptacle, fluorescent lighting, a motor- or a transformer-operated appliance.

4. To be installed and/or used in accordance with appropriate electrical codes and regulations.
5. This includes mercury-vapor, sodium vapor and metal halide lamps.
6. Use only one (1) Vizia RF+™ dimmer in a multi-location circuit with up to 9 coordinating remotes (without LEDs) or up to 4 matching remotes (with LEDs). The remote(s) will turn the light on at the brightness level selected at the dimmer.
D) The Primary Programmer/Controller will assign a node ID number (0-240) to the module.

NOTE: This ID number (Node) will be stored in the controller to be used for future reference. Note: You may give the name of the device used in this text.

1. The light level will be successfully installed in the network.

NOTE: If the device is successfully included in the network and not visible on the display, the node ID will be reset and removed from the network, then the module will re-associate with the network. The first node ID it has received and ignored on the network will be the new node ID assigned to it.

Step 9 Excluding Dimmer from Network:

NOTE: It is very important to accurately Exclude devices from the network. If the device being excluded is a part of the mesh network, this ensures that all information has been removed from your Primary Programmer/Controller from the network table and is not counted on to be a part of the mesh network.

A) Using a Leviton Programmer/Controller, set the Push Pad to the off position. Press the Menu button and scroll down to System Settings. Press the center button to select System Settings. Press the center button to select Network. While close to the Dimmer, press the push pad to the Menu button and then press the push pad to the Exclude device from the network. While the Programmer/Controller is in the Exclude device mode and the push pad pressed, the push pad will turn on and off at the press of the push pad. The Programmer/Controller is still trying to communicate with the device. Until the device stops flashing, press the push pad. If your device is not responding, or you are unable to control it after you have tried to Include/Exclude it multiple times, it may be necessary to remove the device from your original network settings. To accomplish this, proceed as follows:

1. Press the push pad either to the right (node ID is odd) or left (node ID is even) to display the current device ID.
2. Press the push pad to the left half of the Dimmer/Bright Bar — the LED will turn off.
3. Press the push pad to the right half of the Dimmer/Bright Bar — the LED will turn on.

CAUTION: SETTING DEVICE TO FACTORY DEFAULT DOES NOT REMOVE THE DEVICE FROM THE NETWORK AGAIN AND IT IS REASSIGNED TO THE PRIMARY CONTROLLER IN THE NEXT INCLUDE/EXCLUDE CYCLE. IF YOU ARE EXCLUDING A DEVICE FROM THE PRIMARY CONTROLLER'S INFORMATION TABLE, YOU WILL NEED TO RE-ASSOCIATE THE DEVICE TO THE PRIMARY CONTROLLER TO PROVIDE ACCESS TO THE DEVICE OR YOU MAY FAIL TO RESPOND TO SOME DEVICES.

B) When standing close to the module (approx. 25 feet), gently press top of push pad until the locator LED turns off.

When lights still do not turn ON, refer to the TROUBLESHOOTING section.

TRoubleshooting:

- Lamps fail a light connection.
- The device is not installed as shown in diagram in order to engage the device.
- Your device is not programmed properly. Refer to "INSTALLATION" section to verify if it has been included in the 2-WAVE™ network.
- Device operation is not limited.
- Device does not operate lights.
- Ensure that total wire length does not exceed 30 feet.

This equipment has been tested and found to comply with the limits for a Class B Digital Device, pursuant to Part 15 of the FCC Rules. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment OFF and ON, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/television technician for help.
