Meet the Outlet

The Outlet lets you control, automate, and monitor lamps, electronics, and small appliances from anywhere, trigger lamps to automatically turn on when you come home, save energy by restricting power to appliances, and turn any three-prong plug into a smart, controllable device.

How to connect an Outlet

Select "Connect New Device" in the free SmartThings mobile app and then plug in the Outlet.

If your device doesn’t connect

If your device doesn’t connect after plugging it in, remove the Outlet from the wall receptacle. Press and hold the device’s Connect button while plugging the Outlet back into the wall. Once the LED is ON, release the button and follow the “Connect New Device” steps in the SmartThings app.

Installation Tips: The Outlet works best if it’s within 15 feet (4.5 meters) of the SmartThings Hub when you connect it.
